

ERP VS WMS

Enhancing Supply Chain Capabilities with Osa

Risk Alert:

Your ERP Warehouse Management May Be Playing with Fire...

Extending an ERP system into WMS functionalities can lead to a significant increase in **total cost of ownership** or a reduction in **time to value**.

Utilize a dedicated, modern WMS software tailored for ecommerce and omnichannel selling to facilitate strategic growth without unexpected charges or limitations on adaptability.

- **Ensure your team can efficiently process, pick, pack, and ship** increasing order volumes without errors or challenges.
- **Access real-time inventory data** to drive profitable decisions and sync seamlessly with your operations.
- **Utilize real-time dashboards** and recommendations to optimize time management and continuously improve processes.
- **Choose a system built for adaptability**, aligning with your strategic growth plan without unexpected charges.

Supply Chain Management is Complex...

Osa bridges the gap between ERP and WMS functionalities to revolutionize warehouse and order operations flow.

How Osa Enhances ERP-WMS Co-Existence:

- Facilitates seamless integration between ERP and WMS platforms
- Fosters harmony between comprehensive business management and specialized warehouse operations
- ERPs provide a holistic view of organizational activities
- WMS adds agility and efficiency to warehouse processes
- Complements ERP functionalities seamlessly

Value Within the Warehouse:

Osa WMS enhances warehouse operations beyond ERP capabilities

- **Inventory Forecasting** to minimize stockouts and overstocks
- **Omnichannel Selling Capabilities** streamline pricing, inventory management, replenishments, and revenue tracking
- **Process Automation** boosting efficiency by up to 4X with automated workflows
- **Integration** seamless communication and data exchange, enhancing data accuracy, improving efficiency, providing comprehensive insights & supporting scalability
- **Wave Management Tools** to ensure quick fulfillment of product allocations
- **Flexible UoM Capabilities** to optimize space utilization by storing inventory in multiple units of measure

Connect. Unify. Optimize.

Enhanced Order Operations Flow:

Osa WMS streamlines order operations flow, reducing manual intervention and boosting productivity

- **Returns Management** for efficient handling of returns authorization, including RMA for financial processing
- **Cost-effective Parcel Management Tools** facilitate seamless parcel shipping, including rate shopping, sortation, and label generation for timely and cost-efficient delivery
- **Value Added Services** functionality allows businesses to manage complex e-commerce service requirements, including service billing
- **Powerful Reporting Analytics Tools** provide actionable insights through customizable dashboards, enabling data-driven decision-making
- **AI-driven Machine Learning** technology automates and scales warehouse operations, ensuring optimal efficiency and accuracy

Osa solutions are tailored to warehouse management. We help you enhance efficiency, accuracy, and customer satisfaction.
